1.0 EXECUTIVE SUMMARY

NORTECH Environmental, Health & Safety (**NORTECH**) has completed a Phase 1 Environmental Site Assessment (ESA) for the property located at 6598 Klawock-Hollis Highway, Alaska (Site). The Site is comprised of 0.948 acres and is legally described as Lot 6, Block 65, US Survey 1569 and is currently owned by Alaska Energy Authority (AEA). Presently, AEA leases the Site to Alaska Power & Telephone (AP&T). AP&T currently utilizes this property as the Klawock Industrial Site on which AP&T has constructed a substation and transmission line. This Phase I ESA has been completed in accordance with the scope of limitations of ASTM Practice E 1527-13.

The property is currently developed with the AP&T substation, an old Quonset hut, and a wooden structure with a covered parking area. In addition to the permanent structures, two trailer mounted and decommissioned generators were present at the Site. Various pieces of equipment and supplies associated with ongoing projects are also being stored at the Site until needed by the specific projects. Several dozen decommissioned and drained transformers were stored within the gated and locked sub-station at the time of the Site visit. All visually inspected transformers had "No PCB" stickers.

Four off-Site properties were identified in the environmental database search within the specified search radii that have the potential to impact the subject property, including Klawock Fuels Tank Farm, Klawock Island Biocell, Klawock Former Clinic, and Klawock B Street Transformer Oil. The subject property is also listed on the Alaska Department of Environmental Conservation's (ADEC) Spills and Contaminated Sites Databases due to historic contamination, some of which may originate off-Site. The ADEC has issued a ruling of No Further Remedial Action Needed and placed Institutional Controls on the Subject Property. None of the off-property listings identified during the database search are considered to pose a potential environmental threat to the Subject Property.

Due to the presence of documented petroleum contamination in soil and groundwater on the Subject Property **NORTECH** ranks the Site as **Medium Risk**. A Phase II investigation has already occurred and both soil and groundwater have been delineated on Site to an extent acceptable to the ADEC. **NORTECH** did not identify any significant data gaps that should be addressed, and therefore further investigation on the Subject Property is not necessary.

2.0 INTRODUCTION

2.1 Purpose

Alaska Power & Telephone contracted **NORTECH** to perform a standard Phase I ESA on 0.948 acres and located at 6598 Klawock-Hollis Highway. This investigation provides a search of prior and current property uses at the Site and adjacent properties to determine the likelihood of past or present contamination by toxic or hazardous substances.

2.2 Methodology

This report summarizes **NORTECH's** investigation, findings, analysis, and opinions regarding the environmental condition of the Site. The scope of work was to complete an All Appropriate Inquiries (AAI) for the Subject Property. The AAI final rule provides that current versions of ASTM Standard E1527 are consistent with the requirements of the rule and can be used to satisfy AAI requirements. The scope of **NORTECH's** site assessment service is in accordance with the ASTM Practice E 1527-13. The information is provided to assist in the completion of "all

appropriate inquiry” and to meet the “due diligence” requirements of the Comprehensive Environmental Responses, Compensations and Liability Act (CERCLA or “Superfund”) as amended by the Superfund Amendment and Re-authorization Act (SARA) in 1986. Any exceptions to, or deletions from, this practice are described in Section 2.3 of this report.

To accomplish the objectives of the project, the following services were provided:

- Review of relevant documentation of the Site, including aerial photographs.
- Review of federal and state databases for known or suspected contaminated sites and leaking underground storage tanks within ASTM search radii.
- Visual assessment of the property for indications of potential environmental issues and hazardous materials.
- Interviews with individuals knowledgeable about the Site and its operation and history.

Upon completion of the research, **NORTECH** reports on the recognized environmental conditions (RECs) that have been identified. In addition to the ASTM standard, **NORTECH** also assesses the probability of the existence of contamination and rates the Site based on the perceived risk of contamination impacts. The four risk categories are defined below.

No Risk: No evidence was found to indicate contamination of the Site or that hazardous substances, including petroleum products, have been improperly handled on site. **NORTECH** does not find cause for further investigation.

Low Risk: Investigation has revealed the potential for on-site contamination, the possibility that hazardous substances have been mishandled, a threat of their release exists, and/or off-site contamination has potential to impact the property. The report will include discussion and/or recommendations for further action, as warranted.

Medium Risk: Mishandled hazardous substances or soil and/or water contamination may have been identified at the Site. Identified concerns warrant a Phase II investigation.

High Risk: Mishandled hazardous substances were encountered or there is a high potential for significant on-site contamination. Phase II assessment will be recommended to determine the actual presence and/or levels of contamination and the need for remedial action.

2.3 Exceptions of Assessment and Limitations

This report summarizes our investigation, findings, analyses, and opinions regarding the environmental condition of the property based on a review of records and site observations. The extent of our assessment, by definition, was not of a scope necessary to reveal all conditions with regard to environmental contamination or conformance with regulations, codes, permits of all the agencies having jurisdiction. The work scope delineated by ASTM Practice E 1527-13 is considered adequate to identify significant indications of contamination and major concerns that would represent pivotal environmental issues important to a property owner. The purpose of the ESA is to identify existing environmental conditions; our findings should be considered representative only of the time at which the ESA was completed.

Limitations exist with the assessment provided and all the environmental issues cannot be addressed in the scope of this effort. For example, ASTM E 1527-13 (Section 13) Non-Scope

Considerations such as asbestos containing materials, radon, lead in drinking water, lead based paint, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, and high voltage power lines are only addressed if pertinent information is discovered during the assessment and/or is specifically authorized by the client. The assessment does not include evaluation of any Non-Scope Considerations.

This report is a record of research and observations of the subject property as described and was prepared for the exclusive use of AP&T and its assigns with respect to the Site. If it is made available to others, it should be for information on factual data only and not as a warranty of surface or subsurface conditions, such as those interpreted from results presented or discussions herein. No other warranty or presentation, either expressed or implied, is included or intended.

3.0 SITE DESCRIPTIONS

3.1 Location and Legal Description, Site Owner and Current Occupant

The Site is located in Section 10, Township 73 South, Range 81 West of the Copper River Meridian, as shown on the U.S. Geological Survey (USGS). The property's legal description is Lot 6, Block 65, U.S. Survey 1569, Klawock Townsite located in Ketchikan Recording District, First Judicial District, State of Alaska. The Klawock Industrial Site is approximately 41,312 square feet (0.948 acres). The elevation of the subject property is approximately 28 feet above mean sea level, and the subject property and surrounding area slopes to the south.

Site Owner: Alaska Energy Authority

Site Occupant: Alaska Power & Telephone

3.2 General Setting and Site Description

Site Structures:

Two permanent structures are located on Site, a Quonset hut and a wood frame building previously used as a tire shop. Both structures are in poor condition. The AP&T Klawock Substation is also present on Site, and includes transformers, power transmission lines, a generator within a mobile trailer unit, and a 20,000 gallon above ground fuel storage tank (AST) containing diesel, all within a fenced and locked portion of the Site. A 40-foot connex, used for small equipment storage, is located outside the fenced sub-station.

Site Utilities: The Site is connected to municipal water and sewer. However, water is currently shut off to the property at the water main itself and AP&T has not been able to locate the valve.

Climate: Klawock has an oceanic mild climate (*Köppen Cfb*), marked by mild winters and cool summers. Klawock has an average yearly low temperature of 42.5 F, with an average low of 29° F in January and February. The yearly average high temperature is 51° F, with an average high of 66° F in July and August. Klawock has an average yearly temperature of 46.8° F and receives an average of 94.6 inches of rain and 39.1 inches of snow a year.

3.3 Vicinity Characteristics and Hydrogeologic Characteristic

Topography and Slope: The Subject Property is located in Section 10, Township 73 South, Range 81 West of the Copper River Meridian, as shown on the U.S. Geological Survey (USGS), Craig C-4 quadrangle, Alaska. The elevation of the Subject Property is approximately 28 feet

above mean sea level. Based on observations made during the Site visit, the Subject Property and surrounding area slopes gently to the south. The substation is located on a raised gravel pad which is 2 to 3 feet higher than the rest of the Site.

Local Geology and Hydrogeology: The geology of Prince of Wales Island has been greatly modified by glaciation. Silty, sandy gravels covered by dense, poorly sorted glacial till are found over much of the Klawock area. The site was constructed on an area of muskeg overlaying glacial till. The depth of the muskeg beneath the Site is unknown. Information provided by the Site representatives and contacts and confirmed by observations made of shallow excavations conducted on the Site, indicates that the Site has been covered with several layers of gravel fill. The fill is thought to be between 3 to 8 feet deep across the Site, with the greatest amount of fill present on the southwestern portion of the Site and adjoining ADOT right-of-way.

Depth to Groundwater and Groundwater Flow Direction: Due to the nature of the native soils (rocky) wells are not generally advanced to any significant depth on Prince of Wales Island and depth to groundwater at the Site or surrounding area is not known. The direction of groundwater flow in the Site vicinity is also unknown; however, based on the topography of the Site and surrounding area, the estimated direction of groundwater flow in the Site vicinity is likely south/southwest towards the Klawock River and the ocean.

Surface Water and Surface Water Drainage: In general, the surface water flow direction across the Site is toward the south.

Nearest Surface Water Body: The nearest major surface water body is the Klawock River, located approximately 1,000 feet south of the Site.

4.0 RECORDS REVIEW

The Alaska Department of Natural Resources (ADNR) Recorder's Office maintains a database of deeds and other official property records. According to information provided this property is currently owned by Alaska Energy Authority (AEA) and leased to Alaska Power & Telephone (AP&T). **NORTECH** did not identify any significant data gaps that should be further addressed during the records review process.

Information supplied by ADNR indicates the Subject Property was deeded to the State of Alaska, Department of Highways (ADOH), by George E. M. Gustafson, acting as Trustee for the Townsite of Klawock Addition in 1977. The Site was then deeded to the Alaska Power Authority (APA), a public corporation of the State of Alaska, by the State of Alaska, Department of Transportation and Public Facilities (ADOT&PF) in 1986. From approximately 1989 until 1994, APA leased 30,000 square feet of the Site to the Alaska Department of Natural Resources (ADNR) but retained 10,000 square feet at the southeast corner of the Site for the Quonset hut and ADOT's use. APA became the Alaska Energy Authority (AEA), and, in early 1993, AEA intended to deed the Site to ADNR, however, the transaction was never completed.

The Site was occupied and used as a maintenance station by ADOH and then ADOT&PF from at least the mid-1960s until the late 1980s. Both agencies conducted repair and maintenance activities on vehicles and heavy equipment on the property. In 1987, the Site was used for materials storage by the APA during construction of the Craig-Klawock Intertie.

ADOT&PF continued to use the Quonset hut located on the property until 1992. Alaska Power and Telephone (AP&T) has used the hut for storage of line equipment since 1994. In November 1994, at the request of AP&T, AEA gave AP&T a right of entry to build a substation on the property, which was constructed on the Site in 1994. In 2005 a right-of-entry was granted by AEA to AP&T.

4.1 Environmental Database Searches

Jennifer Stoutamore of **NORTECH** reviewed a database search prepared by EnviroSite Corporation (EnviroSite) (Appendix 3). Additionally, Ms. Stoutamore manually searched the major U.S. Environmental Protection Agency (EPA) (Superfund and Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS)), Alaska Department of Environmental Conservation (ADEC) Contaminated Sites (CS) Database, ADEC Spills Database, and registered Underground Storage Tank (UST) databases for concerns in the Site area. A list of all databases and associated acronyms can be found in the EnviroSite report.

It should be noted that the Subject Property is identified as location "A3" within the EnviroSite report, and the report places the Klawock Industrial Site 383 feet west and across Big Salt Road from its actual location (Appendix 3). It is unclear why the Federal Databases place the Subject Property at this location, but while the map location is not correct, the information contained within the report is accurate.

Klawock Industrial Site, 6598 Klawock-Hollis Highway – Subject Property

The Subject Property was identified on the following databases:

- Alaska Department of Environmental Conservation Contaminated Sites Database (ADEC CS Database): The Subject Property was added to the ADEC CS Database in October of 1999 due to diesel contamination in soil and groundwater.
- State Hazardous Waste Sites (SHWS): The SHWS is the same as the ADEC Contaminated Sites Database.
- Institutional Control Sites in Alaska (IC-AK): The Subject Property status is presently listed as cleanup complete with Institutional Controls (IC). In 1999 the Site was initially ranked using the AHRM and a Site Characterization Workplan was approved. Later that year, the Site was added to the Database after diesel contaminated soil and groundwater was found. Method three cleanup level was approved based upon groundwater not being used as a drinking water source in 2000, and, in 2001, an Institutional Control record was established. The most recent IC compliance review was conducted in 2022 and occurs every five years.

In January 1999, Dames & Moore conducted a Phase I Environmental Site Assessment (ESA) on the Subject Property. During Phase I activities, one groundwater and five soil samples were collected and submitted to CT&E Environmental Services Inc. for analysis. The groundwater and soil samples were analyzed for gasoline range organics (GRO), benzene, toluene, ethylbenzene, and xylenes (BTEX), diesel range organics (DRO), and residual range organics (RRO). A sample collected from the excavation was also analyzed for PCBs, and the metals arsenic, cadmium, chrome, and lead. Diesel contamination above Category B Cleanup Levels was detected in soil. GRO, DRO, and RRO were also detected above applicable cleanup levels in Site groundwater. The Phase I recommended a Phase II occur to delineate impacted soils and groundwater.

A Phase II Investigation was conducted by Dames & Moore in August of 1999. Eight soil borings were advanced and developed into groundwater monitoring wells. A total of 19 soil samples and eight groundwater samples were collected as part of the Phase II activities. Laboratory results indicated DRO concentrations in soils were above applicable cleanup levels only in the area of the old AST. While DRO concentrations in groundwater were also exceeded, the highest concentrations of DRO were located at the upgradient boundary of the Site and adjacent to the roadway. This indicates that the source of groundwater contamination may be from an off-Site source.

The ADEC approved alternate cleanup levels for soil and water in a letter dated May 7, 2001. The Record of Decision states that the ADEC agrees that groundwater under the Subject Property is not a current or reasonably potential future source of drinking water. Therefore, the alternative cleanup levels were set to ten times the then current default cleanup levels. Soil and groundwater contamination on the Subject Property was below the approved alternate cleanup levels and the ADEC determined no further remedial action was required at that time. Institutional Controls (ICs) were placed on the Site, which are reviewed every five years.

While impacted soils and groundwater remain on Site, contamination has been fully delineated on the property. Although this is a Recognized Environmental Concern (REC), based on the current and projected future use of the Site, the known levels and limits of contamination, and the institutional controls present on the property, **NORTECH** does not consider the known contamination to be likely to impact the intended use of the property.

Off Site Properties

The database search identified four off-Site properties with listings on at least one of the researched databases, within the ASTM search radius, and with a status of either active or Institutional Controls (ICs) in place. A review of the identified off-property sites indicated that none of the sites would reasonably impact the Subject Property.

No properties identified during the database search were within 500 feet of the Subject Property. Due to distance, location, contamination type, or known limits of the reported contamination, none of the identified off-Site properties are likely to impact the Subject Property. Information on all the identified properties, including several that were beyond the specified search radius but could not be mapped by EnviroSite, are available in the EnviroSite report (Appendix 3).

Klawock B Street Transformer Oil – 0.302 miles east, cross gradient

The Klawock B Street Site is a residential property listed on the State Hazardous Waste Sites (SHWS-AK) Database and listed as active on the ADEC Contaminated Sites (CS) Database. According to the ADEC CS entry, thirty-four gallons of transformer oil was dumped into a small stream and adjacent soil. Laboratory analysis of the contaminated soil did not detect polychlorinated biphenyls (PCBs), but diesel range organics (DROs) were confirmed above the ADEC cleanup levels. The spill site connects into a small stream that drains into the Klawock Inlet and residual oil continues to leach from the area of release. However, no sheen was observed at the creek outfall. Due to the property's location and the fact the stream in questions does not run through the Subject Property, **NORTECH** does not consider this location to pose a potential threat to the Subject Property.

Klawock Former Clinic – 0.425 miles west, cross gradient

Klawock Former Clinic is listed on the following databases: Brownfields-AK, Brownfields-Acres, FED Brownfields, FRS, and SHWS-AK. The City of Klawock owns the site, which has been used as the community's clinic since the 1930's and is currently listed as active in the ADEC CS Database.

In 2018, the Klawock Cooperative Association applied for a DEC Brownfields Assessment and Cleanup. According to the 2019 Property Assessment and Cleanup Report (PACP), the building foundation and framework are reportedly sound, however both asbestos containing materials and lead-based paint were identified on the interior and exterior of the building. As exterior paint was considered lead-based paint and paint chips were observed on the ground surface, soil samples were analyzed for total lead and PCBs. One soil sample contained lead in concentrations above applicable ADEC Cleanup levels. PCB concentrations for soil samples were below applicable cleanup levels.

Although the ADEC CS Database indicates no remediation of lead in soils has occurred, due to the distance from the Subject Property and as the source of lead is paint chips from the building, **NORTECH** does not consider the Klawock Former Clinic to pose a threat to the Subject Property.

Klawock Island Biocell – 0.911 miles west, cross gradient

The Klawock Island Biocell is listed on the ADEC CS Database with ICs. The Klawock Heenya Corporation currently owns the property.

The Klawock Island Biocell site was initially a three-part, 13,000 cubic yard, active soil treatment facility constructed using contaminated soil from seven contaminated sites in the Craig/Klawock area on Prince of Wales Island in 1993. Biotreatment continued through 2005, when measurements were taken of the Biocell, and volume of the facility was revised to approximately 5,400 cubic yards. The ADEC approved a site-specific cleanup level for DRO of 8,250 mg/kg and placed ICs on the property. The latest IC Review Report concluded the site's conditions remained unchanged. An IC review continues to be conducted every five years.

Based on the distance from the Subject Property, **NORTECH** does not consider the Klawock Island Biocell to be a potential threat to the Subject Property.

Klawock Fuels Tank Farm – 0.954 miles west-southwest, cross gradient

Currently owned by Klawock Heenya Corporation, the Klawock Fuels Tank Farm is located on Klawock Island. The site is listed on the State Hazardous Waste Site (SHWS-AK) and the ADEC CS Database as an active location; however, the tank farm is no longer in use.

Soil Sampling in 1991 by Randolph Bayliss (1992) indicated soils at the former Klawock Fuels Tank Farm had been impacted by a past fuel release in concentrations above Alaska Department of Environmental Conservation (ADEC) Migration to Groundwater Cleanup Levels. In order to address contamination on various properties owned by the Klawock Heenya Corporation, Environmental Services Limited (ESL) submitted a Corrective Action Plan (CAP) to the ADEC in May 1993. Under the ADEC approved CAP, ESL excavated several thousand cubic yards of impacted materials from accessible areas of the Klawock Fuels Tank Farm and placed those soils in a bioremediation cell (see Klawock Island Biocell above). In August of 1993, the ADEC placed the Klawock Fuels Tank Farm on the ADEC Contaminated Sites (CS) Database

In 2018, Kai Environmental Consulting Services, LLC (Kai Environmental) conducted soil sampling at the Site under an ADEC approved workplan. The two soil samples collected within the 1993 excavation footprint at a depth of 6.0 feet below ground surface were above applicable cleanup levels for DRO. However, samples collected from the rest of the Site were below applicable cleanup levels.

As the Klawock Fuels Tank Farm is no longer in service, impacted soils were not present above 6.0 feet below ground surface, did not extend beyond site boundaries, the area of impacted soil was minimal, and human exposure to impacted soils was unlikely, Kai Environmental requested site closure and natural attenuation of the site. The ADEC did not approve closure and the case remains open on the ADEC CS Database.

Based on the location of the Tank Farm and delineation indicating contamination does not extend beyond property boundaries, **NORTECH** does not consider the Klawock Fuels Tank Farm to be a potential threat to the Subject Property.

Unmappable/Orphan Sites

NORTECH reviewed a list of unmappable sites identified in the EnviroSite Report. These include remote locations and sites that may have been poorly defined and/or no physical addresses associated with the location for which an environmental concern was identified. **NORTECH** completed a manual search of the various referenced databases to review available documents or records pertaining to the location, nature and extent of the environmental concern for each unmappable site. **NORTECH** did not identify any unmappable or orphan sites that represent a REC to the Subject Site.

4.2 Aerial Photographs

NORTECH reviewed aerial photographs provided by EnviroSite from 1948, 1965, 1979, and 1982. **NORTECH** also reviewed Google Earth Images of the Subject Property from 2014, 2019, and 2021. The EnviroSite aerial photos are included as Appendix 3.

Year: 1948

The Subject Property and surrounding areas are wholly undeveloped with dense tree populations including mature spruce, cedar, and hemlock and sporadic natural clearings. There are no roadways leading to the Site nor any structures to speak of.

Year: 1965

In this photograph, the Klawock-Hollis Highway spans from the direction west northwest to east southeast. The Quonset hut, which still stands today, is identifiable on the Site. A narrow rectangular object, which is $\frac{3}{4}$ the length of the hut, resides along the western-most face. Two unknown objects can be seen along the eastern side of the hut. A short entryway leads to the hut on the southern portion of the Site from Klawock-Hollis Highway and appears to be constructed of gravel or earth. A small unidentifiable structure abutting the highway rests within close proximity to the west of the Quonset hut. Several unidentifiable objects appear to be situated along the southern border of the Subject Property lining the Klawock-Hollis Highway where a few vehicles can be seen traveling its expanse. With these exceptions, the majority of land is undeveloped and covered with natural vegetation.

Year: 1979

Although the image is of poor quality, this photograph indicates that the Site and surrounding area was still largely undeveloped. Big Salt Road can be seen extending north bordering the eastern side of the Subject Property. Several narrow roads branching from Big Salt Road and Klawock-Hollis Highway are in the early stages of construction. To the north of the Site, a plot of land has been cleared and contains a large structure.

Year: 1982

Snow cover is present in this image. Review of this aerial photograph indicates the majority of the Site has been developed. Property adjacent to the Site has an addition of what appears to be a small building. To the east of the Site, multiple structures can be seen as more development has taken place. To the northeast, residential structures have been added to a narrow road looping from Big Salt Road.

Year: 2014 – 2021 (Google Earth):

The Site and surrounding area are developed much as they are today. The Quonset hut, substation, and wooden building (former tire center) are present on the Subject Property. The surrounding area is also developed as it is today.

5.0 INTERVIEW AND SITE INSPECTION

NORTECH arrived on Site on October 4, 2022 and met AP&T's Prince of Wales Island Power Operations team member Mr. Kasey Smith on Site. Mr. Smith provided access to the on-Site structures, trailers, and sub-station as well as a history of the Subject Property.

5.1 Interview

NORTECH interviewed Mr. Smith concerning the history and current use of the Site. According to Mr. Smith, a tire shop was located on the property and prior to that ADOT&PF used the property. The Quonset hut has been used in one capacity or another by all Site users since it was constructed at an unknown date.

In 1995 the switch station (the AP&T substation) began operations on the property. Mr. Smith stated the current 20,000-gallon diesel AST at the substation was installed two years ago and was placed into operation four to six months prior to the Site visit. The substation also contains a 2,000-kw capacity generator/engine referred to as Engine 8.

Mr. Smith stated that when oil changes occur in the engine or associated equipment, the oil is taken to the AP&T Klawock shop where it is burned in the facility's waste oil burner. Other fluids, such as anti-freeze, are taken to Ketchikan Full Cycle for recycling or appropriate disposal.

Several dozen decommissioned and empty transformers were stored outdoors on pallets within the substation's fenced area. The transformers are awaiting proper disposal, and all had visible "No PCBs" stickers on them. Mr. Smith stated the empty transformers were stored within the secure area of the substation as AP&T had previously had issues with the transformers being stolen. The transformers are emptied and decommissioned at the Klawock shop prior to being transported to the substation for secure storage until they can be disposed of.

In addition to the permanent structures on the Site, two trailer mounted engine/generator units, both from Whale Pass, were being stored on Site. One generator dated to 2003 and according to Mr. Smith had been on Site for approximately eight years. The second, newer engine, has

been stored at the Site for approximately four months. Both units are mounted on enclosed trailers and all fluids had been drained from the engines and associated day tanks. Mr. Smith also indicated the radiators present on Site had been decommissioned, were empty, also originated from Whale Pass, and arrived around the same time as the latest Whale Pass engine.

5.2 Site Inspection

NORTECH conducted a visual inspection of the Site, including the interior of the wooden structure, the Quonset hut, the two decommissioned engines from Whale Pass, and the current Engine 8 within the AP&T substation.

The wooden structure on the northeast corner of the property is in poor condition and is used for dry storage. Tools, supplies, decommissioned equipment, and expired fire extinguishers are currently being stored within the structure. **NORTECH** observed several holes in the roof and associated water damage to the structure's ceiling, walls, and flooring. The structure also contained a bathroom, though Mr. Smith stated it was not in use as the water had been turned off and AP&T has been unable to find the water main valve to turn water back on to the property.

The Quonset hut was empty at the time of inspection and Mr. Smith indicated there was the possibility the structure and associated concrete pad may be removed in the future. Road work and silting of the drainage ditch in front of the Quonset hut have caused flooding and periodic standing water that hinders the ability to use the structure. Some insulation and electrical wiring remain within the structure, but there is currently no power to the building and it is not in use. **NORTECH** did not observe any floor drains.

The substation is surrounded by a chain link fence and the gate is kept locked. This area contains Engine 8, power transmission lines, associated transformers, and the 20,000-gallon double walled diesel AST. As previously noted, several dozen empty and decommissioned power line transformers were also being stored in this area to prevent theft until they can be properly disposed of. **NORTECH** did not find evidence of petroleum or other spills on surface soils within the substation area.

An inspection of both of the previous Whale Pass engines indicated that fluids (oil, antifreeze, fuel, ect.) has been drained from both units. Mr. Smith indicated the newer Whale Pass engine could still be used, though had been replaced at the end of its useful lifespan in order to ensure uninterrupted power at Whale Pass. The older engine had a tag indicating the engine had seized in 2003 and was non-operational. **NORTECH** did not find evidence of petroleum or other spills on surface soils around either engine.

NORTECH did not observe indications of a potential REC, nor conditions that may indicate a significant data may be present during the Site inspection.

6.0 ANALYSIS

NORTECH has completed a Phase I ESA for the property located at 6598 Klawock-Hollis Highway in Klawock, Alaska. The Site is comprised of one parcel of approximately 0.948 acres and legally described as Klawock Industrial Site and is currently owned by AEA and AP&T leases the property for use as the Klawock substation and general storage.

The Site is developed with a Quonset hut, wooden structure (now being used for storage), and the substation. Two trailer mounted and enclosed decommissioned engines/generators are stored at the Site, along with radiators from the recent Whale Pass upgrade. Various other supplies and small equipment are stored on-Site. The Site is currently occupied and run a power substation by AP&T. **NORTECH** identified the following known or potential RECs at the Site:

- Historic petroleum contamination
 - DRO and VOC contamination in soil and groundwater were found during a Phase I and II in the early 1990s
 - Surface soils were impacted above applicable cleanup levels at the location of the previous on-Site AST
 - The highest concentrations of contaminants in groundwater were found upgradient of the Site, suggesting the primary source is likely off-property
 - The ADEC approved alternate cleanup levels of ten times the then current most stringent cleanup levels
 - Soil and groundwater contamination was below the Site-Specific alternate cleanup levels
 - The ADEC closed the Site with ICs, no further remedial action in 2001
 - As contamination on the property has been delineated, is below Site specific cleanup levels, and has been closed by the ADEC with ICs, no further testing, delineation, or sampling is needed on the Subject Property
 - If the ICs are followed, known contamination should not affect the current or planned future use of the Subject Property
 - No significant data gaps were identified during the records review or Site visit

NORTECH did not identify any additional potential RECs on other properties within the ASTM search radius that may impact the Site.

7.0 CONCLUSIONS AND RECOMMENDATIONS

NORTECH has completed a Phase I ESA for the property located at 6598 Klawock-Hollis Highway, Alaska. This Phase I ESA has been completed in accordance with the scope and limitations of ASTM Practice E 1527-13. Any exceptions to, or deletions from this practice are described in Section 2.3 of this report. **NORTECH** has made the following conclusions regarding the site:

- Historic contamination is present in Site soil and groundwater
 - Known contamination on the property has been delineated
- Soil and groundwater on the Subject Property meet ADEC approved Alternate Cleanup Levels
- The ADEC closed the Site with ICs in 2001
- If the current ICs are followed, current known contamination is unlikely to impact current and planned future use of the Site

Based on the above conclusions, **NORTECH** considers the Subject Property to be **medium risk**. As the known contamination has been previously delineated and is below ADEC approved Site Specific Cleanup Levels, additional delineation or characterization work, such as a Phase II investigation, is not needed.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

NORTECH is a Fairbanks-based, professional consulting firm, established in 1981, offering environmental engineering, civil engineering, and industrial hygiene consulting services. The firm has offices in Fairbanks, Anchorage and Juneau and has completed numerous Phase I ESAs and other property and/or building inspections across Alaska.

We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Source Description

Source Description :

ICIS provides a database that, when complete, will contain enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Source Description :

ICIS provides a database that, when complete, will contain enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Former Use :

The property was previously used as the community's clinic and has been owned by the City of Klawock since approximately 1930. In January 2018, the Klawock Cooperative Association applied for a DEC Brownfields Assessment and Cleanup. The Cooperative would like to have a hazardous building materials survey completed on the former clinic to evaluate how/if the building can be renovated for community housing.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

SUBJECT NAME: Klawock Industrial Site
ADDRESS: Klawock, Klawock, AK
LAT/LONG: 55.552836 / -133.084965

PREPARED FOR: Nortech Engineering
ORDER #: 78954
REPORT DATE: October 06, 2022

+ Subject Property - SSURGO - STATSGO

SOIL COMPOSITION IN GENERAL AREA OF SUBJECT PROPERTY:

Agency source: Soil Conservation Service, US Department of Agriculture

SOIL MAP ID 1

SSURGO

USDA Soil Name	Karheen, Series
USDA Soil Texture	Not Reported
Hydrologic Soil Group	D
Soil Drainage Class	Very poorly drained
Hydric Classification	95
Corrosion Potential - Uncoated Steel	High

Layer	Depth (inches)	Soil Texture	AASHTO Group	Unified Soil Description	Saturated Hydraulic Conductivity micro m/sec	Soil Reaction pH
1	0-23		Reference: This is a classification of soil material for highway and airfield construction (Procedure M 145-73 in Am. Assoc. of State Highway and Transportation Officials, 1984).	Highly organic soils, Peat. Reference: This is a classification of soil material designed for general construction purposes. It is dependent on the particle size distribution of the <75 mm, the liquid limit, and the plasticity index and on whether the soil material is high in organic matter (ASTM test D 2487, in ASTM, 1984).	14.11-42.34	3.5-5.5
2	23-38		Reference: This is a classification of soil material for highway and airfield construction (Procedure M 145-73 in Am. Assoc. of State Highway and Transportation Officials, 1984).	Highly organic soils, Peat. Reference: This is a classification of soil material designed for general construction purposes. It is dependent on the particle size distribution of the <75 mm, the liquid limit, and the plasticity index and on whether the soil material is high in organic matter (ASTM test D 2487, in ASTM, 1984).	42.34-141.14	3.5-5.5
3	38-152		Reference: This is a classification of soil material for highway and airfield construction (Procedure M 145-73 in Am. Assoc. of State Highway and Transportation Officials, 1984).	Highly organic soils, Peat. Reference: This is a classification of soil material designed for general construction purposes. It is dependent on the particle size distribution of the <75 mm, the liquid limit, and the plasticity index and on whether the soil material is high in organic matter (ASTM test D 2487, in ASTM, 1984).	42.34-141.14	3.5-5.5

 Email Address : annag@cityofklawock.com

RTC Enforcement ID : N/R
 Violation ID : 153080
 Submission Year : 2022
 Violation First Reported Date : 1980-09-30
 Contaminant Name : Fluoride
 Rule Family : Inorganic Chemicals
 Rule Group : Chemicals
 Rule Name : Inorganic Chemicals
 Violation Type : Monitoring, Regular
 Is Health Based : N
 Is Major Violation : N/R
 Severity Indicator Count : N/R
 Public Notification Tier : 3
 Address Line 1 : P.O. BOX 469, KLAWOCK, 99925

Map Id: 1
 Direction: W
 Distance: 0.456 mi., 2410 ft.
 Elevation: 121 ft.
 Relative: Higher

Site Name : AK2120169 | KLAWOCK WATER
 P.O. BOX 469 550 SUMMITT STREET | 550

 Email Address : annag@cityofklawock.com

RTC Enforcement ID : N/R
 Violation ID : 1458892
 Submission Year : 2022
 Violation First Reported Date : 2020-11-19
 Contaminant Name : Total Haloacetic Acids (HAA5)
 Rule Family : Stage 2 Disinfectants and Disinfection Byproducts Rule
 Rule Group : Disinfectants and Disinfection Byproducts Rule
 Rule Name : Stage 2 Disinfectants and Disinfection Byproducts Rule
 Violation Type : Maximum Contaminant Level Violation, Average
 Is Health Based : Y
 Is Major Violation : N/R
 Severity Indicator Count : 1
 Public Notification Tier : 2
 Address Line 1 : P.O. BOX 469, KLAWOCK, 99925

Environmental Protection Agency

(202) 566-1667

Q3 Flood Data

HYDROLOGIC UNIT

Hydrologic Unit Maps

USGS

The United States Geological Survey created a hierarchical system of hydrologic units originally called regions, sub-regions, accounting units, and cataloging units. Each unit was assigned a unique Hydrologic Unit Code (HUC). As first implemented the system had 21 regions, 221 subregions, 378 accounting units, and 2,264 cataloging units. Over time the system was changed and expanded. As of 2010 there are six levels in the hierarchy, represented by hydrologic unit codes from 2 to 12 digits long, called regions, subregions, basins, subbasins, watersheds, and subwatersheds. The table below describes the system's hydrologic unit levels and their characteristics, along with example names and codes.

WETLANDS NWI

National Wetland Inventory

U.S. Fish and Wildlife Service

(703) 358-2171

Wetland Inventory for the United States

SSURGO

Detailed Soil Data Map

(866) 835-5322

Airport landing facilities

BASINS

Better Assessment Science Integrating point & Non-point Sources

U.S. Environmental Protection Agency

855-246-3642

Integrated geographical information system national watershed data and environmental assessment known as Better Assessment Science Integrating point & Non-point Sources

DIGITAL OBSTACLE

Obstacles of interest to aviation users

Federal Aviation Administration

855-379-6518

The Digital Obstacle File describes all known obstacles of interest to aviation users in the U.S. with limited coverage of the Pacific the Caribbean Canada and Mexico. The obstacles are assigned unique numerical identifiers; accuracy codes and listed in order of ascending latitude within each state or area by FAA Region.

EPICENTERS

National Geographical Data Center

National Geographical Data Center

303-497-6826

List of recent and historic earthquakes and information.

FLOOD DFIRM

National Flood Hazard Layer Database

Federal Emergency Management Agency

The National Flood Hazard Layer Database (NFHL) is a computer database that contains the flood hazard map information from FEMA's Flood Map Modernization program. These map data are from Digital Flood Insurance Rate Map (DFIRM) databases and Letters of Map Revision.
